#### Introduction

Welcome to the LibGuide for the SSU2000 module.

Your friendly librarians have attached the Powerpoint File used for the Library session on 25 February. We also attached two-page Quick Guides for some popular databases that are useful for your research topics.

## FindMore vs. Google Scholar

**Q: When should I use FindMore?**

**How does it compare to Google Scholar?**

**A: The main strength of FindMore:**

- You will have access to almost everything shown
- Better filter options
- Includes Books owned by NUS Libraries

**Google Scholar:**

- More results, including government documents etc.
- May have better relevancy ranking.

# Google Scholar

[Overview](#) [Google Scholar](#) [PubMed](#) [Quick Help](#)

Google Scholar Comments (0)

<http://libguides.nus.edu.sg/googlescholarlinks>

Video on setting of Google Scholar with

Google Scholar results will link you directly to the ejournal and you will not have access to the full-text, as you will not have authenticated via NUS Libraries subscriptions.

One way around the problem is to use the [proxy bookmarklet method](#), which usually works but there may be issues.

The other way is to use the Google Scholar Library Links programme which we are registered with. You will need to set it up.

**Abstract**

Cellular immunotherapy has been widely accepted as a new powerful modality of cancer treatment. The last 2 decades have seen impressive results in its application against haemato-oncologic malignancies, melanomas and prostate carcinoma. Cellular immunotherapy has since found applicability beyond cancer into autoimmunity and continues to expand in its clinical applicability. The discovery that stem cells have the ability to differentiate into more mature cell types, like neurones and myocardium, has focused research on using exogenous cells to repair damaged tissues. This led to numerous clinical trials using stem cells in myocardial infarction, cardiomyopathy and spinal cord damage. Results have ranged from modest to significant clinical outcomes with continuing debate on the exact process of regeneration achieved. The intertwining between cell therapy and transfusion medicine now includes research on progenitor cells for the production of mature red cells. It is also clear that cell therapy has enabled an improved understanding of the pathogenesis and clinical course of many diseases, while perhaps its role in regenerative medicine is most enticing. However, the critical role of manufacturing in terms of cost, complexity, reproducibility, and regulatory matters remains a central issue in the consideration of whether cell therapy has met all of its promise.
