Library Orientation 2020
Master of Nursing

Toh Kim Kee
NUS Medical Library
10 Jan 2020
- Library facilities, Services, Resources
- Database Search
Opening Hours

Mon - Fri:
8.30am - 9.00pm Term
8.30am - 6 pm (Vacation)

Sat:
10am - 5pm
Closed (Vacation)

Sun & Public Holiday:
Closed

Reading Area is open 24/7 for NUS Staff & Students

Check the opening hours of Medical Library at:
https://libportal.nus.edu.sg/frontend/opening-hours-calendar?selectedLib=5
Let’s watch a short video!
Library Facilities

1. 5 REASONS TO VISIT NUS MEDICAL LIBRARY

- 24-Hour Reading Area
- Training Room with PCs
- Discussion rooms
- Photocopy/Printing Room
- Borrow books - Reserve Books & Readings (RBR) collection
Study Areas

24 hours reading room

Training room

Discussion rooms
Self Service Machines

Self-check for RBR books

Self-check for Main shelf books

Venous Ulcer

Venous ulcers are wounds that are thought to occur due to improper functioning of venous valves, usually of the legs (hence leg ulcers). They are the major occurrence of chronic wounds, occurring in 70% to 90% of leg ulcer cases. Venous ulcers develop mostly along the medial distal leg, and can be painful with negative effects on quality of life.

Database Search

CINAHL (Cumulative Index to Nursing & Allied Health Literature) is the leading database for nursing studies, allied health, biomedicine, and healthcare. It comprises bibliographic records and selected full-text of nursing publications including books, book chapters, pamphlets, audiovisuals, dissertations, educational software, selected conference proceedings, standards of professional practice, nurse practice acts, etc. There are more than 600,000 entries.

PubMed® comprises more than 30 million citations for biomedical literature from MEDLINE, life science journals, and online books. Citations may include links to full-text content from PubMed Central and publisher web sites.

   The most serious form of type I or IgE-mediated hypersensitivity reaction is anaphylaxis. A standardized case definition of anaphylaxis as an adverse event after immunization has been developed. Such reactions to vaccines, including influenza vaccine, are rare but potentially life-threatening. Until recently, all influenza vaccines were manufactured in eggs. ...
Administering Influenza Vaccine to Egg–Allergic Persons

John M Kelso
PMID: 24962036 DOI: 10.1586/14760584.2014.933079

Abstract

The most serious form of type I or immediate hypersensitivity is anaphylaxis. Anaphylaxis is a clinically defined condition; however, a standardized case definition of anaphylaxis has not been developed. Such reactions to vaccines are perceived as particularly threatening. Until recently, all influenza vaccines were produced in chick embryos, and the vaccines was thought to pose a risk for patients with egg allergy to suffer such reactions. Although patients with egg allergy receive anaphylaxis during vaccinations, the risk of egg allergy to influenza vaccine should be carefully evaluated by an allergist for guidance on subsequent immunization.

Keywords: allergy; egg allergy; hypersensitivity; immunization; influenza; vaccination.

1. **How flu shots help protect the public: Here’s what ob/gyns need to know when treating their at-risk patients.**

   (includes abstract) Contemporary OB/GYN. Mar2018; 94(3): 36-41. (3p) (Article) ISSN: 0090-3159 AN: 135401116

   Abstract: The article offers information on how the flu vaccine protects the public. Topics discussed include the approved vaccines for 2016-2019 in the U.S., including inactivated injectable vaccines (IIV), recombinant flu vaccines (RIV), and live attenuated vaccine (LAIV), comparison between trivalent and quadrivalent vaccines, and information on the nasal spray vaccine.

   **Subjects**: Influenza Vaccine Classification; Public Health; Obstetric Care
